DOMAIN 1: AIVERSECITY FUTURE-READY WORKFORCE

Jobbery

Where Humanity Begins Its Journey to Its Next Evolution

Team #slaynergy · SDC Hackathon 2026

PROBLEM STATEMENT

Jobs expected to be highly affected by AI and digitalisation:

697,000

Workers are at risk of losing jobs to AI if upskilling is not done.

With the advent of AI, the job landscape is changing faster than ever before.

Rather than feared, AI should be wielded to build a brighter future.

Jobbery’s Audience

TARGET GROUP 01

Primary Audience

High-skilled, employed workers at risk of future job-displacement due to inadequate knowledge of AI

TARGET GROUP 02

Secondary Audience

- Fresh graduates
- Unemployed high-skilled workers
- Discouraged high-skilled workers

End-to-end human connection

The worker

Learns to grow with AI

Uploads a resume to explore future career paths & skills needed

The primary user: High-skilled, employed workers who desire to keep up in an ever-changing world

The advisor

The final, innately human, step of the reskilling

Adds personalized guidance to worker’s plan

PERKESO officers support workers who need further guidance

A real person to keep an eye on you, rather than just having an AI on you.

Main Features of Jobbery

- Skills intake
- AI-trend signal layer
- Role matching and skills gap
- Reskilling pathway
- SDG mapping
- Handling uncertainty

JOBBERY · FORECAST · AI-SKILL FORECASTING PAGE

The Forecast: Prediction Market

Three futures, with odds.

Slow, medium, and fast AI progress.
Votes of the forecasters create estimates, not certainties.

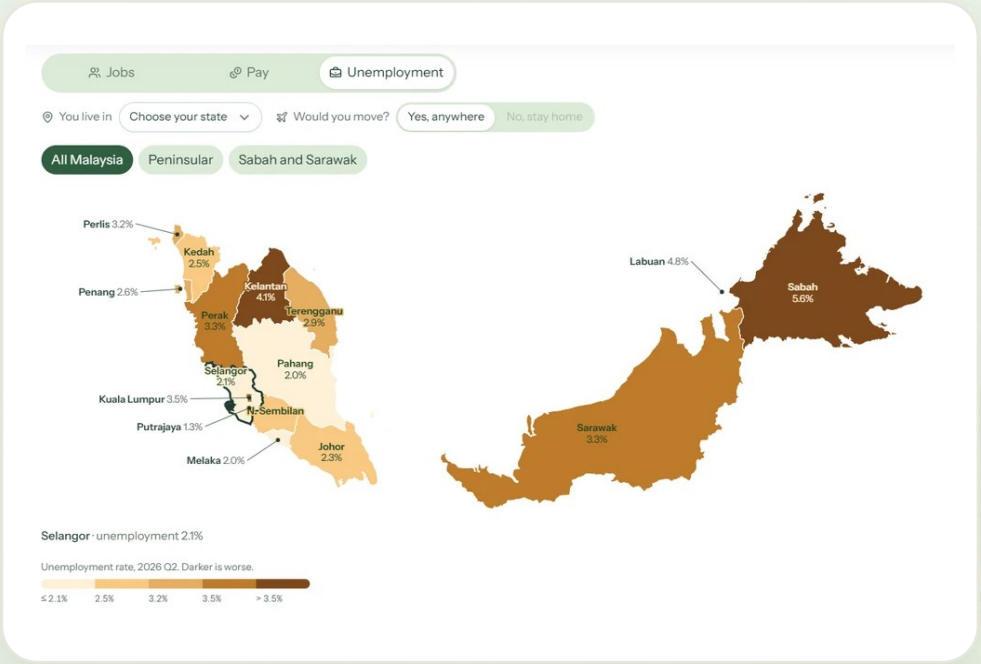

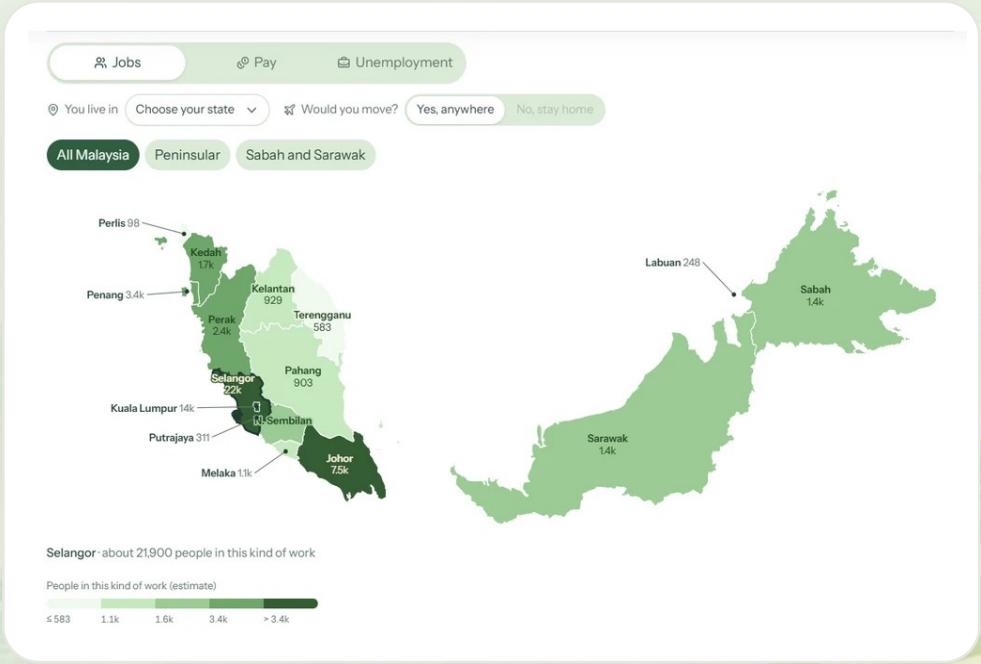

JOBBERY · JOB MAP · THE MALAYSIAN JOB MAP

Heat map

Jobs distributed around Malaysia

Those willing to relocate can make smart decisions based on job abundance, salary and unemployment rates.

Economics

MACROECONOMIC PILLAR 01

Structural Unemployment

Occupational immobility	Weekly reskilling plan
Geographical immobility	Job + Salary Map
Changes in the structure of the economy	Transferable-skill pathways

MACROECONOMIC PILLAR 02

Frictional Unemployment

Workers lack timely info	Target opportunities
Suitable jobs are hard to find	Increased human capital

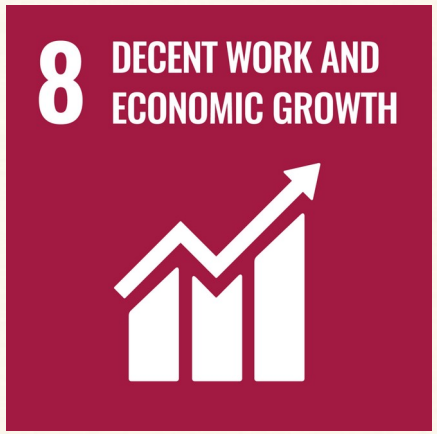

UN’s Sustainable Development Goals

4.4 Increase the number of people with relevant skills for financial success

5.7 Equal rights to economic resources, property ownership, and financial services

8.5 Full employment and decent work with equal pay

9.2 Promote inclusive and sustainable industrialisation

10.3 Ensure equal opportunities and end discrimination

Why workers don’t upskill:

AI panic breeds disdain and widens the skill gap

56% professionals use AI tools at work

26% received formal training

Limitation and Future Works

Limit

The prediction market is a simulation

No real human predictors yet.

Limit

The AI speed progression are estimates

Estimates from past public data and mathematical modelling

Limit

The resume AI runs on outside models

If AI is left on, its text is sent once to a hosted AI service.

Limit

Living costs are from household data

The living costs per person are derive from household spending data.

Future

Our own local models

Host local models on our own infrastructure.

Future

Expand to other countries

The same plan for workers abroad, using each country’s own job, wage and cost-of-living data.

Thank You
